UNIVERSITY OF MUMBAI

Teacher's Reference Manual

Subject: Artificial Intelligence
with effect from the academic year

2018 – 2019

PRACTICAL NO-1

A. Write a program to implement depth first search algorithm.
B. Write a program to implement breadth first search algorithm

AIM:-
Write a program to implement depth first search algorithm.
GRAPH:-

PYTHON CODE:-

```python
graph1 = {
    'A': set(['B', 'C']),
    'B': set(['A', 'D', 'E']),
    'C': set(['A', 'F']),
    'D': set(['B']),
    'E': set(['B', 'F']),
    'F': set(['C', 'E'])
    }
def dfs(graph, node, visited):
    if node not in visited:
        visited.append(node)
        for n in graph[node]:
            dfs(graph,n, visited)
```

    return visited
visited = dfs(graph1,'A', [])
print(visited)

OUTPUT:-

```
graph1 = {'A': set(['B', 'C']),
          'B': set(['A', 'D', 'E']),
          'C': set(['A', 'F']),
          'D': set(['B']),
          'E': set(['B', 'F']),
          'F': set(['C', 'E'])
          }
def dfs(graph, node, visited):
    if node not in visited:
        visited.append(node)
        for n in graph[node]:
            dfs(graph,n, visited)
    return visited
visited = dfs(graph1,'A', [])
print(visited)
```
```

NOTE:-
Game Rules

1. Traditionally the first player plays with "X". So you can decide who wants to go with "X" and who wants go with "O".
2. Only one player can play at a time.
3. If any of the players have filled a square then the other player and the same player cannot override that square.
4. There are only two conditions that may match will be draw or may win.
5. The player that succeeds in placing three respective marks (X or O) in a horizontal, vertical or diagonal row wins the game.

PRACTICAL No.-6

A. Write a program to solve Missionaries and Cannibals problem.
B. Design an application to simulate number puzzle problem.

Aim:-

Write a program to solve Missionaries and Cannibals problem.

Diagram:-

Python Code:-

```python
import math
# Missionaries and Cannibals Problem
class State():
        def __init__(self, cannibalLeft, missionaryLeft, boat, cannibalRight,
missionaryRight):
                self.cannibalLeft = cannibalLeft
                self.missionaryLeft = missionaryLeft
                self.boat = boat
                self.cannibalRight = cannibalRight

AIM:-
Design an application to simulate number puzzle problem.
PYHTON CODE:-
'''

8 puzzle problem, a smaller version of the fifteen puzzle:
States are defined as string representations of the pieces on the puzzle.
Actions denote what piece will be moved to the empty space.
States must allways be inmutable. We will use strings, but internally most of
the time we will convert those strings to lists, which are easier to handle.
For example, the state (string):
'1-2-3
 4-5-6
 7-8-e'
will become (in lists):
[['1', '2', '3'],
 ['4', '5', '6'],
 ['7', '8', 'e']]

'''

PRACTICAL No.-7
A. Write a program to shuffle Deck of cards.
B. Solve traveling salesman problem using artificial intelligence technique.

Aim:-
Write a program to shuffle Deck of cards.
Diagram:-
Python Code:-
#first let's import random procedures since we will be shuffling
import random

#next, let's start building list holders so we can place our cards in there:
cardfaces = []
suits = ["Hearts", "Diamonds", "Clubs", "Spades"]
royals = ["J", "Q", "K", "A"]
deck = []

#now, let's start using loops to add our content:
for i in range(2,11):
    cardfaces.append(str(i)) #this adds numbers 2-10 and converts them to string data

for j in range(4):

cardfaces.append(royals[j]) **#this will add the royal faces to the cardbase**
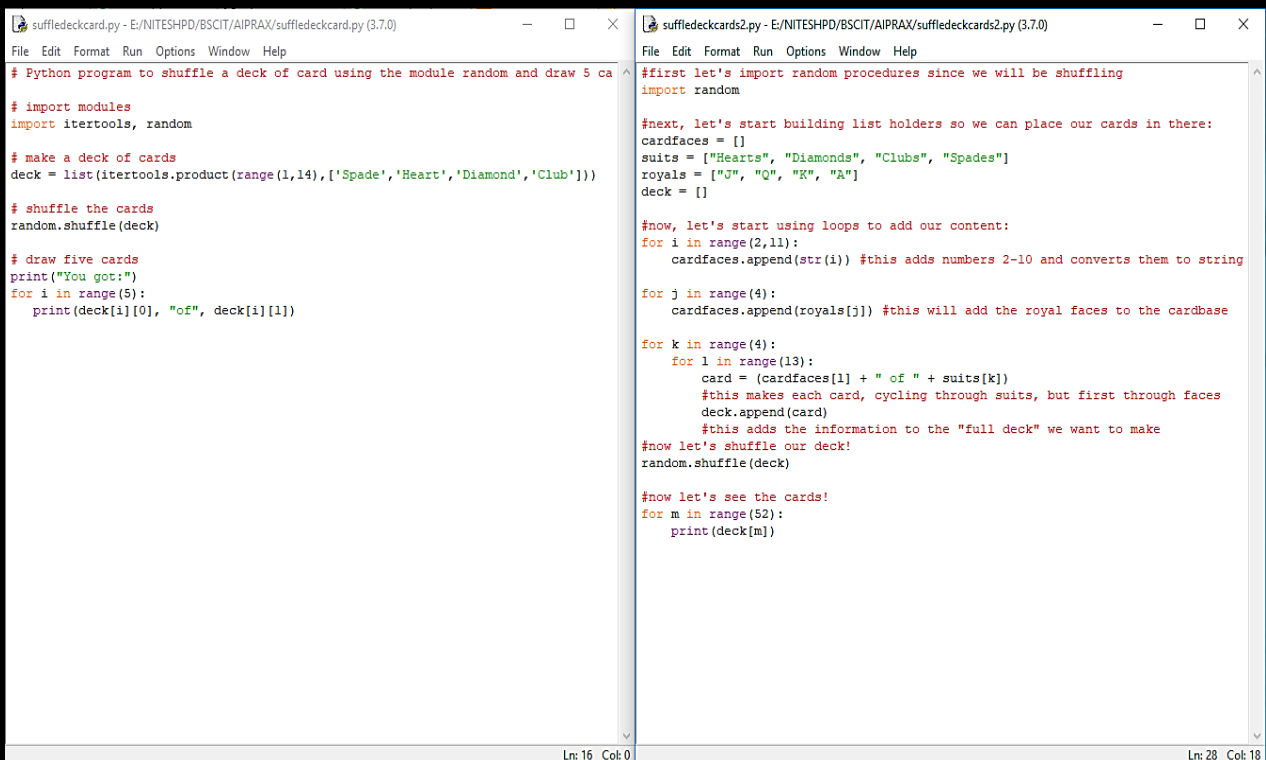

```
for k in range(4):
    for l in range(13):
        card = (cardfaces[l] + " of " + suits[k])
```
#this makes each card, cycling through suits, but first through faces
```
        deck.append(card)
```
**#this adds the information to the "full deck" we want to make**
#now let's shuffle our deck!
```
random.shuffle(deck)
```

#now let's see the cards!
```
for m in range(52):
    print(deck[m])
```

<div align="center">

OR

</div>

 # Python program to shuffle a deck of card using the module random and draw 5 cards
 # import modules
```
import itertools, random
```
 # make a deck of cards
```
deck = list(itertools.product(range(1,14),['Spade','Heart','Diamond','Club']))
```
 # shuffle the cards
```
random.shuffle(deck)
```
 # draw five cards
```
print("You got:")
for i in range(5):
    print(deck[i][0], "of", deck[i][1])
```

<u>Output:-</u>

```
# Python program to shuffle a deck of card using the module random and draw 5 ca

# import modules
import itertools, random

# make a deck of cards
deck = list(itertools.product(range(1,14),['Spade','Heart','Diamond','Club']))

# shuffle the cards
random.shuffle(deck)

# draw five cards
print("You got:")
for i in range(5):
    print(deck[i][0], "of", deck[i][1])
```

```
#first let's import random procedures since we will be shuffling
import random
